Patent No. US20020115842A1
GENERAL INFORMATION
GENERAL INFORMATION
APPLICANT: Friddle, Carl Johan
APPLICANT: Hilbun, Erin
TITLE OF INVENTION: No. US20020115842A1e1 Human Proteases and Polynucleotides Enco
FILE REFERENCE: LEX-0241-USA
CURRENT APPLICATION NUMBER: US/09/965,631
CURRENT FILING DATE: 2001-09-27
PRIOR PRICIATION NUMBER: US 60/236,689
PRIOR FILING DATE: 2000-09-29
NUMBER OF SEQ ID NOS: 7
                                                                                                                                                                                                                                                                                                                                                                                                             ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NiAlternate names: procollagen N-proteinase
C;Species: Bos primigenius taurus (cattle)
C;Date: 15-oct-1999 #sequence_revision 15-oct-1999 #text_change 15-oct-1999
C;Accession: T18517
R;Colige, A.; Nusgens, B.V.; Laplere, C.M.
submitted to the EMBL Data Library, February 1996
A;Description: Cloning of the cDNA of the bovine procollagen I N-proteinase.

Cloning of the rat ADAM'S-1 gene and its down regulation in endothelial cells in cirrhotic rats.";
Liver 20:165-172(2000).
-1- FUNCTION: CLEAVES AGGRECAN, A CARTILAGE PROTEOGLYCAN, AND MAY BE INVOLVED IN ITS TURNOVER. HAS ANGIOGENIC INHIBITOR ACTIVITY (BY SIMILARITY). ACTIVE METALLOPROTEASE, WHICH MAY BE ASSOCIATED WITH VARIOUG INFLAMMATORY PROCESSES AS WELL AS DEVELOPMENT OF CANCER CACHEXIA. MAY PLAY A CRITICAL ROLE IN FOLLICULAR RUPTURE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Q9WUQ1; Q9ERI1;

"ADAM-TS8, a novel metalloprotease of the ADAM-TS family located on mouse chromosome 9 and human chromosome 11.";

Genomics 62:312-315(1999).

-I - FUNCTION: HAS ANTI-ANGIGENIC PROPERTIES.

-I - COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).

-I - SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similatity).

-I TISSUE SPECIFICITY: HIGLY EXPRESSED IN ADULT AND FETAL LUNG, LOWER EXPRESSION IN BRAIN, PLACENTA, HEART, STOMACH AND FETAL BRAIN AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   KIDNEY.

C -1- COFACTOR: BINDS 1 ZINC ION (BY SIMILARITY).

C -1- SUBCELLUIAR LOCATION: Secreted, Associated with the extracellular matrix (By similarity).

C -1- TISSUB SPECIFICITY: EXPRESSED IN BRAIN, LUNG AND HEART. EXPRESSED AT VERY LOW LEVEL IN PLACERTA AND SKELETAL WUSCLES.

C -1- INDUCTION: BY INTERLEUKIN-1.

C -1- INDUCTION: BY INTERLEUKIN-1.

C -1- DOMAIN: THE SPACER DOMAIN AND THE TSP TYPE-1 DOMAINS ARE IMPORTANT POR A TIGHT INTERACTION WITH THE EXTRACELLULAR MATRIX.

C -1- PTM: THE PRECURSOR IS CLEAMED BY A FURIN ENDOPEPTIDASE.

C -1- SIMILARITY: CONTAINS 1 DISINTEGRIN-LIKE DOMAIN.

C -1- SIMILARITY: CONTAINS 1 TSP TYPE-1 DOMAIN.

C -1- SIMILARITY: CONTAINS 1 TSP TYPE-1 DOMAIN.

C -1- CAUTION: HAS SOMETIMES BEEN REFERRED TO AS ADAMTS2.
                                                                                                                                                  Tortorella M.D., Pratta M.A., Liu R.-Q., Abbaszade I., Ross H.,
Burn T.C., Arner E.C.;
"The thrombospondin motif of aggrecanase-1 (AbAMTS-4) is critical for
aggreen substrate recognition and cleavage.";
J. Biol. Chem. 275:25791-25797(2000).
-I-FUNCTION: CLEAVES AGGRECAN, A CARTILAGE PROTEOGIYCAN, AND MAY BE
INVOLVED IN ITS TURNOVER. MAY PLAY AN IMPORTANT ROLE IN THE
DESTRUCTION OF AGGRECAN IN ARTHATIC DISEASES. COULD ALSO BE A ONE
CRITICAL FACTOR IN THE EXACERBATION OF NEURODEGENERATION IN
ALZHEIMER, S DISEASE.
                                                                                                                                                                                                                                                                                                                                                                                                                             CATALYTIC ACTIVITY: Cleaves aggrecan at the 392-Glu-|-Ala-393
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Prant, Provoul30; Zn_MTpeptdse.
